PING ERROR TEST

Explain proper scenario for following ping errors ?

Destination host unreachable

The source device or an intermediate router cannot reach the destination network/host

Request timed out

The ping request was sent but no ICMP Echo Reply was received within the timeout period.

Reply from some ip destination host unreachable

An intermediate device usually a router is reporting that it cannot forward the packet to the destination. This can indicate a routing problem, unreachable next hop, or destination network failure.

TTL expired

The packet's TTL reached 0 before reaching the destination. Every router that forwards an IP packet decreases its TTL by 1. The packet keeps circulating between routers until TTL becomes 0 and then the router discards it.
